

Auto-Correct Your Materials With Refresh™ Server

Refresh™

- Make your material creation process a pleasure with a fast, accurate and easy to use predictive technology designed by business end-users.
- Software that protects your material master database by preventing errors creeping back into your cleansed and compliant ERP system.
- Automated matching to Built-In Global standards UNSPSC eOTD eCI@ss INTRASTAT HS Plus many other professional standards.
- The latest Standard ERP technologies (Standard ABAP, Material Master Tables and Fields, ABAP WebDynpro...) - no risk to your existing ERP.

Features and Benefits:

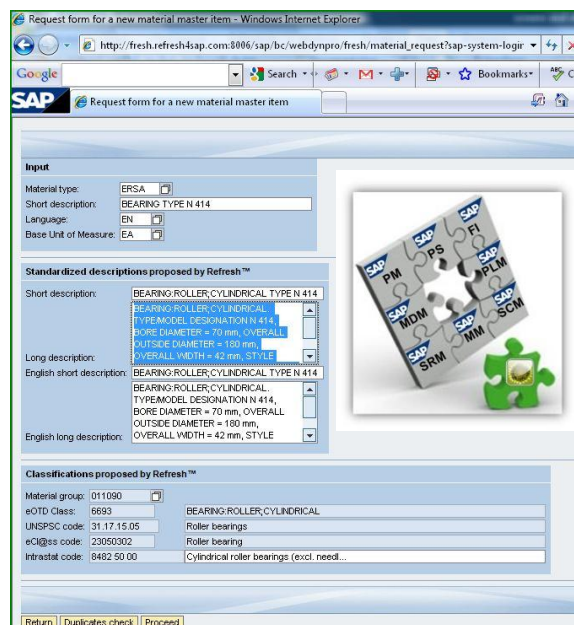

Refresh™ Server is an innovative Fresh approach to material master data governance with or without Workflow. Leading SAP and non-SAP customers are using Refresh™ Server today to automatically Classify, Re-describe, De-Duplicate & Standardize thousands of materials per month in REAL TIME, automatically and INSIDE the ERP system.

Technology & System Requirements:

Refresh Server Version 3 is compatible with:
 SAP ERP versions 4.6, 4.7& ECC6
 Most modern ERP / EAM systems
 Microsoft Windows version 98, 2000, XP, Vista, Win 7
 Java version 1.6 or Higher.

Fresh International:

Fresh is an Enterprise Software Company with a dedicated Research & Development team working full-time on software algorithms for material master data standardization in ERP. Fresh was founded in 2003 to help SAP customers cleanse and classify large numbers of materials through software automation, but leveraging all SAP standard tools where possible to minimize the customer's total cost of ownership. THE ALGORITHMIC ADVANTAGE

Refresh™ is a set of patented matching algorithms which have been built for ERP customers like you in cleansing millions of materials. These algorithms work inside SAP or other ERP systems out of the box, helping you create complete and accurate new materials faster - without any of the typical rework.

AUTO-BUILD YOUR DESCRIPTIONS

Whether it is short or long text, Refresh™ will automatically build your item texts to make sure they are complete, consistent & clean. Having a Live Data Standard in ERP means data is RIGHT FIRST TIME.

AUTO-DE-DUPLICATE

Refresh™ will mine all of your existing data and warn you BEFORE you create a duplicate or misspell it.

AUTO-PREDICT KEY FIELDS

Refresh™ pre-fills material fields that are hard to get right first time e.g. Technical Class, Spend Class, Material Group & Commodity codes. Speeds up the creation workflow by providing the right data at the right time – all at the initial point of entry.
